

FOR IMMEDIATE RELEASE

STRATEGIC TELEMETRY, XUS CORP TEAM UP TO PROVIDE FIRST ELMS-SUPPORTED LED ROADWAY LIGHTING

ITS-compliant software offers exclusive remote control, monitoring capabilities

March 1, 2009: Strategic Telemetry and XUS Corporation have announced the first electrical lighting and management system (ELMS) software to support LED roadway lighting fixtures. Compliant with Intelligent Transportation Systems (ITS) standard NTCIP 1213, this proprietary technology offers remote control and monitoring of lighting, power metering and ground-fault detectors.

Jim Frazer, Strategic Telemetry chief operating officer, credits the success of this first-ever ELMS-supported LED roadway lighting implementation to the strategic partnership between the two companies. "As LED lighting is almost infinitely dimmable, this offers an incredible opportunity to save energy," Frazer explains. "We are very proud to be working with XUS – an experienced, advanced manufacturing technology partner – to bring this exciting solution to the marketplace."

Bob Gray, CEO of XUS Corporation, also stresses the importance of this alliance. "We see a partnership with Strategic Telemetry as a great opportunity for XUS and for our customer," Gray says. "Strategic Telemetry's support of the multitude of data points within the U.S. Federal Highway Administration's ITS standards allows XUS to offer control, monitoring and diagnostics previously unimaginable to the street and roadway lighting marketplace."

About XUS Corp: The XUS team is singularly dedicated to developing green technology and sustainable lighting solutions for business, municipalities, and homeowners. Our engineered approach to product development and manufacturing allows us to stay ahead of the ever-shifting technology curve. XUS Corp.'s proprietary designs provide regulated voltage and superior heat management, and our products provide better performance and an expected maximum life cycle. Compact and lightweight, our products boast a clean, sleek design and provide aesthetic benefits over outdated fixtures. Based in Michigan, XUS products are manufactured exclusively in the U.S.A.

About Strategic Telemetry: Ingenuity, innovation and technical excellence are integral to Strategic Telemetry. Our revolutionary software suite continues to evolve to include dynamic asset management, enterprise resource planning and many other exciting options. User compliance, market needs and federal standards are assured through strict adherence to systems-design engineering principles. Implementation of Strategic Telemetry's broad range of solutions allows our customers to quickly begin saving time, energy and lives.
